EDUCATION

West Virginia University | Morgantown, WV
Bachelor of Science, Chemical Engineering

May 2018

PROFESSIONAL EXPERIENCE

Weigh Anchor | Remote / Multiple Sites

Senior Project Manager - Site Engineering and Construction

2022 to Present

- Lead site engineering for pharmaceutical facility and equipment-installation projects for Pfizer, supervising contractors and equipment vendors from scope development through construction, commissioning, and turnover.
- Serve as owner's representative through design, bidding, procurement, and field execution, including existing-conditions reviews, contractor prequalification, walkthroughs, RFIs, submittals, award recommendations, and construction follow-up.
- Coordinate mechanical, electrical, plumbing, HVAC, fire-protection, and equipment-interface requirements against design documents, permits, installation constraints, and operating needs.
- Conduct site walks to monitor contractor progress, work quality, OSHA and PPE compliance, stormwater controls, schedule risks, and design-to-field conflicts requiring resolution.
- Manage closeout activities including final inspections, punch lists, Certificate of Occupancy, fire-marshal sign-off, MEP commissioning, system turnover, and follow-up corrective work.

Arcadis Inc. | Seattle, WA

Senior Site Engineering Project Manager

March 2020 to May 2022

- Directed day-to-day planning, engineering, construction, installation readiness, and handover across a \$50M portfolio of biotechnology laboratory and process-equipment projects for Seattle Genetics.
- Coordinated equipment manufacturers, contractors, facilities, engineering, IT, quality, and end-user teams to resolve utility, access, schedule, documentation, and site-readiness requirements before installation.
- Led contractor activity for a \$2M regulated warehouse retrofit, including design coordination, RFIs, submittals, municipal permitting, field progress, safety, punch-list work, and closeout.
- Reviewed biotechnology equipment specifications, design documents, utility requirements, and installation constraints to support procurement and ensure equipment could be safely integrated into operating facilities.
- Supported qualified facility turnover by coordinating MEP commissioning, fire and life-safety approvals, system documentation, and the interface between construction completion and pharmaceutical validation.

Evoqua Water Technologies | Colorado Springs, CO

Project Manager - Water Treatment Systems and Site Execution

May 2019 to March 2020

- Managed \$5.5M in engineered water-treatment system builds across three concurrent projects, including a \$1.6M reverse-osmosis container project with demanding cost, labor, schedule, and performance requirements.
- Coordinated Applications Engineering, Supply Chain, manufacturing, Site Execution, and customer teams to align system specifications, process documentation, materials, resources, schedule, and delivery requirements.
- Managed vendor and internal execution issues through Microsoft Project, SharePoint, SAP, WBS tracking, status reviews, risk escalation, and corrective follow-up.
- Maintained customer and site-team alignment through equipment completion, inspection readiness, delivery, installation planning, and project handoff.

Evoqua Water Technologies | Boston, MA

Manufacturing Engineering Supervisor - Continuous Deionization Systems

April 2018 to May 2019

- Supervised first-shift manufacturing of continuous deionization water-treatment systems with 20 direct reports, owning daily safety, staffing, production priorities, quality issues, and output.

- Led root-cause investigations for production and equipment-quality problems, coordinated corrective work, and used lean manufacturing methods to improve process flow, consistency, and reliability.
- Developed a production-scheduling tool that reduced in-process work-in-progress inventory and improved visibility into capacity, priorities, and material demand.
- Used AutoCAD Inventor to design and build a test stand that improved rotameter-component inspection and finished-product quality.

General Electric Aviation | Multiple Sites

Facilities and Chemical Systems Engineering Co-op

May 2015 to August 2017

- Reviewed process requirements, P&IDs, and PFDs for closed-loop chemical-treatment systems, optimized chemical introduction for a 25% efficiency increase, and wrote the engineering scope for an electrolyte-treatment piping redesign.
- Led site EHS investigations and closed more than 120 safety concerns across industrial manufacturing operations, coordinating corrective actions with engineering, operations, vendors, and affected personnel.
- Updated a respiratory-protection program covering more than 400 individual assessments and delivered EHS training for employees working around large industrial equipment and hazardous processes.
- Managed engineering scopes, vendor bids, and field coordination for water-tank repair, drainage and swale work, noise-abatement installations, dock improvements, and industrial waste-reduction projects.
- Managed a \$6M environmental project fund that delivered approximately 23K metric tons of emissions reduction and \$2M in annual cost savings.

Dow Chemical Company | Charleston, WV

Chemical Infrastructure and Wastewater Treatment Engineering Intern

May 2014 to August 2014

- Supported chemical and wastewater infrastructure projects by soliciting and evaluating vendor proposals for sludge-dewatering systems, tank-aeration equipment, and clarifier repairs.
- Developed confined-space entry and lock-out-tag-out procedures for 15 facility equipment units and authored fire-safety procedures for two operating wastewater-treatment plants.
- Verified storage-tank secondary-containment compliance against West Virginia regulatory requirements and documented required corrective actions.
- Monitored SCADA alarms, evaluated operating conditions, and coordinated the appropriate response to protect treatment-system reliability and site safety.
